Practical AI Starter Pack

A compact system for moving from a question to a checked, useful output.

HOW TO USE IT

Write directly on a printed copy or duplicate the prompts into your own notes. Synthetic examples are used. Do not paste confidential school, workplace, or personal data into AI tools.

1. Frame the work

Decide what success looks like before opening a tool.

- ■ What is the actual decision or deliverable?
- ■ Who will use the output?
- ■ What facts are known, uncertain, or missing?
- ■ What data must remain private?
- ■ What would make the output unsafe or misleading?

2. Build the prompt system

Use a short sequence instead of one oversized prompt.

- Context: explain the situation without confidential details.
- Task: name one clear job.
- Constraints: set length, format, sources, and exclusions.
- Review: ask for assumptions and uncertainties.
- Revision: improve one dimension at a time.

3. Verify and deliver

Human review remains the final gate.

- ■ Check every material claim against a reliable source.
- ■ Remove unsupported confidence and invented citations.
- ■ Confirm the output follows school or workplace policy.
- ■ Record what you changed and why.
- ■ Deliver the final work in your own accountable voice.

This resource supports learning and reflection. It is not legal, medical, financial, or professional advice. Verify important decisions with an appropriate qualified person.
